Pune, India

Professional Summary

Engineering Lead – Quality with 7+ years of experience in Quality Engineering, Test Automation, **API Testing**, and **Performance Testing**. Skilled in building scalable automation solutions using **Playwright**, **Selenium**, **Java**, **TypeScript**, **REST Assured**, and **JMeter**, with expertise in **CI/CD** and **AWS**. Leveraged **Generative AI**, **Prompt Engineering**, **GitHub Copilot**, **Amazon Q**, and **Helenium** to accelerate automation development, test design, and debugging. Proven ability to lead automation initiatives, mentor engineers, and drive continuous quality improvement across financial and insurance domains.

Technical Skills

- **Cloud & AI:** AWS, GitHub Copilot, Amazon Q, AI-DLC
- **Automation Tools:** Playwright, Selenium WebDriver, TestNG, Cucumber, Inso CLI,
- **Programming Languages:** TypeScript, Java, Python
- **Test Management Tools:** Rally, JIRA, Jile, TestRail, DevPlus
- **CI/CD Tools:** GitHub Actions, Jenkins, Git, GitHub, Bitbucket
- **Frameworks:** Hybrid, Data-Driven, Keyword-Driven, BDD (Cucumber)
- **Other Tools:** Insomnia, Postman, REST Assured, Apache JMeter

Work Experience

Persistent Systems Limited.

(DEC 2025 - Present)

Engineering Lead - Quality | UHG

Technology: AWS, Playwright, Insomnia, Inso CLI, JMeter, GitHub Actions, Generative AI, Amazon Q

Responsibilities:

- Designed and maintained comprehensive API test suites covering functional, integration, negative, boundary, and end-to-end scenarios to ensure API reliability and data integrity.
- Performed API functional and integration testing using Insomnia and automated API test execution using Inso CLI within CI/CD pipelines, enabling continuous validation and faster feedback.
- Design and execute performance, load, and stress tests using Apache JMeter, analyzing response times, throughput, error rates, and system behavior under varying workloads to identify performance bottlenecks and improve application scalability, stability, and reliability.
- Enhanced automation frameworks by identifying technical bottlenecks, optimizing test execution, and adopting modern automation, cloud, and AI-assisted engineering practices.
- Applied AWS cloud knowledge to test, troubleshoot, and validate cloud-hosted applications and distributed services, leveraging Amazon Q for AI-assisted cloud analysis and issue resolution.
- Leveraged Generative AI and advanced prompt engineering to analyse requirements, generate complex test data, and create functional, negative, boundary, and edge-case test scenarios, reducing test preparation time by 45%.
- Utilized GitHub Copilot for AI-assisted UI and API automation development, code generation, refactoring, debugging, and optimization of reusable automation components.
- Applied AI-DLC practices across the quality engineering lifecycle, incorporating AI into requirement analysis, test design, automation development, code reviews, debugging, defect analysis, and continuous testing.

- Implemented shift-left quality engineering practices by introducing automated and AI-assisted validation earlier in the development lifecycle, enabling early identification of defects and quality risks.
- Collaborated with developers, DevOps engineers, business analysts, and product stakeholders to define test strategies, identify automation and AI adoption opportunities, and ensure quality throughout the software development lifecycle.

Tata Consultancy Services Limited.

(APR 2019 – DEC 2025)

QA Automation Specialist | Aviva Group

Technology: Java, Selenium, REST Assured, Jenkins, GIT

Responsibilities:

- Led QA automation initiatives across enterprise applications in the insurance and banking domains, driving scalable automation strategies for UI, API, functional, and regression testing.
- Defined automation strategies and provided technical direction for scalable test automation solutions, ensuring alignment with application architecture, business requirements, and quality objectives.
- Designed, developed, and maintained robust automation frameworks using Java, Selenium WebDriver, Cucumber, TestNG, and Maven, improving test execution efficiency by up to 40%.
- Designed, developed, and maintained robust automation frameworks using Java, Selenium WebDriver, Cucumber, TestNG, and Maven, improving test execution efficiency by up to 40%.
- Implemented parallel test execution strategies, reducing overall automation execution time by up to 50% and accelerating release feedback.
- Architected reusable automation components and libraries for UI and API testing, reducing test script development and maintenance efforts by up to 40%.
- Integrated Healenium's AI-powered self-healing capabilities with Selenium automation frameworks to dynamically recover from broken element locators, improving test stability and reducing maintenance efforts caused by frequent UI changes.
- Integrated automated testing into CI/CD pipelines, enabling continuous quality validation, faster feedback, and reduced regression testing time.
- Implemented parallel test execution strategies, reducing overall automation execution time by up to 50% and data-driven and database-integrated testing solutions using SQL, enabling dynamic test data management and improving test accuracy by 25%.
- Established comprehensive automation reporting using Allure and Extent Reports, improving stakeholder visibility into test execution, failures, defects, and overall release quality.

Educational Background:

BACHOLR OF SCIENCE, K.T.H.M. COLLEGE, NASHIK (80.89%)

MAY 2018

HIGHER SECONDARY CERTIFICATE, K.T.H.M. COLLEGE, NASHIK (62.48%)

JUN 2015

Achievements and Awards

- Achieved consistent top performance rating for 7 consecutive years.
- Obtained **E2 level proficiency** in Java, Selenium, Playwright and TypeScript through internal certification.

Declaration
